PROFESSIONAL SUMMARY

Software Engineer at Capgemini specializing in Java backend development, Spring Boot microservices, distributed systems, and cloud-ready applications with measurable performance impact. Certified in Google Cloud GenAI Agents, Microsoft AI-900 and AI-102 with experience in Generative AI, Prompt Engineering, AI Agents, RAG pipelines, and scalable LLM workflows.

EXPERIENCE

Capgemini

Software Engineer / Analyst

June 2025 – Present

Bengaluru, India

- Architected enterprise microservices using Spring Boot, Spring Security, and Spring Cloud Gateway, enabling horizontal scaling and achieving 99.5% production availability.
- Engineered JWT-based authentication with RBAC middleware, reducing token validation latency by 40% and eliminating unauthorized access incidents.
- Optimized REST API performance through Spring Data JPA tuning and N+1 query resolution, reducing database response time by 45% and improving throughput by 2x under concurrent load.
- Built JUnit5 and Mockito testing frameworks with SonarQube quality gates in CI/CD pipelines, reducing production defect escape rate by 50% with 80%+ code coverage.
- Collaborated with cross-functional teams across development and testing cycles to deliver scalable backend features within release timelines.

PROJECTS

E-Commerce Microservices Platform | Java • Spring Boot • Microservices • JWT • Redis • MySQL • Docker

- Designed a distributed commerce platform with 5 independently deployable microservices orchestrated through Spring Cloud Gateway, improving API throughput by 2.5x.
- Implemented Eureka service discovery and OpenFeign client-side load balancing, enabling fault isolation and reducing cascading service failures by 60%.
- Secured service boundaries using JWT authentication and RBAC while optimizing JPA indexing strategies that reduced database latency by 42% and supported 3x concurrent transaction load.

FinTrack – Personal Finance Analytics Platform | React • Vite • Chart.js • OAuth2 • PWA

- Engineered Vite build optimization using tree-shaking and lazy loading, reducing bundle size by 35% and improving initial page load from 3.2s to under 1.8s.
- Implemented OAuth2 authentication with structured error handling and token refresh mechanisms, improving authentication reliability by 45%.
- Enabled PWA offline functionality using service-worker caching strategies, achieving 98 Lighthouse performance score and 2x faster repeat-visit loading.

TECHNICAL SKILLS

Languages: Java | Python | JavaScript (ES6+) | TypeScript | SQL

Backend: Spring Boot | Spring Security | Spring Cloud | Spring Data JPA | REST APIs | Microservices | API Gateway | JWT | RBAC | Node.js

AI & GenAI: Generative AI | Prompt Engineering | AI Agents | RAG | LLM Workflows | Vector Search | LangChain

Databases & Caching: MySQL | MS SQL Server | MongoDB | Redis

Tools & DevOps: Docker | Git | CI/CD | SonarQube | GitHub Actions | Postman | Swagger

Architecture: Distributed Systems | Event-Driven Architecture | System Design | Scalable Architecture | Agile/Scrum

CERTIFICATIONS

Google Cloud Gen AI Agents | Microsoft AI-900 Azure AI Fundamentals | Microsoft AI-102 Azure AI Engineer Associate | Agile Software Development - University of Minnesota

EDUCATION

GLA University

Bachelor of Technology - Computer Science & Engineering | CPI: 7.55/10

Mathura, Uttar Pradesh

July 2021 - May 2025
