EXPERIENCE

Capgemini

June 2025 – Present

Software Engineer / Analyst

Bengaluru, India

- Designed and developed Java full-stack applications using Spring Boot microservices, Spring Security, React, and Spring Cloud Gateway, enabling horizontal scalability and achieving 99.5% production availability.
- Implemented Kafka-based event-driven workflows for asynchronous communication across distributed microservices, improving service decoupling and system scalability.
- Built and integrated REST APIs with React UI components, improving data flow efficiency and reducing backend response time by 45% through Spring Data JPA tuning and N+1 query optimization.
- Developed responsive React interfaces and collaborated on frontend-backend integration to improve user experience and streamline feature delivery.
- Built JUnit5 and Mockito testing frameworks integrated with SonarQube and Jenkins CI/CD pipelines, reducing production defect escape rate by 50% while maintaining 80%+ code coverage.
- Collaborated with cross-functional teams across development, testing, and deployment cycles to deliver scalable features within release timelines and maintain production reliability.

Capgemini

Jan 2025 – May 2025

Software Engineer Intern

Bengaluru, India

- Developed Java backend modules and REST APIs using Spring Boot for enterprise applications and assisted with React-based frontend integration.
- Supported microservice integration, debugging, and API enhancements, improving application reliability and reducing issue resolution turnaround time.
- Participated in testing, deployment, and CI/CD workflows while gaining hands-on experience with distributed systems and full-stack application development.

PROJECTS

E-Commerce Microservices Platform | Java • Spring Boot • Microservices • Kafka • JWT • Redis • MySQL • Docker

- Designed a distributed commerce platform with 5 independently deployable microservices orchestrated through Spring Cloud Gateway, improving API throughput by 2.5x.
- Implemented Eureka service discovery and OpenFeign client-side load balancing, reducing cascading service failures by 60%.
- Integrated Kafka-based event processing for asynchronous order and inventory workflows, improving scalability and reducing service coupling.
- Secured service boundaries using JWT authentication and optimized JPA indexing strategies that reduced database latency by 42% and supported 3x concurrent transaction load.

FinTrack – Personal Finance Analytics Platform | React • Vite • Chart.js • OAuth2 • PWA

- Built responsive React UI components and optimized frontend rendering using lazy loading and tree-shaking, reducing bundle size by 35%.
- Implemented OAuth2 authentication with structured error handling and token refresh mechanisms, improving authentication reliability by 45%.
- Enabled PWA offline functionality using service-worker caching strategies, achieving a 98 Lighthouse score and 2x faster repeat visits.

TECHNICAL SKILLS

Languages: Java | Python | JavaScript (ES6+) | TypeScript | SQL

Backend: Spring Boot | Spring Security | Spring Cloud | REST APIs | Microservices | API Gateway | Kafka | JWT | RBAC | Node.js

Frontend: React | Vite | HTML | CSS

AI & GenAI: Generative AI | Prompt Engineering | AI Agents | RAG | LLM Workflows | LangChain

Databases & Caching: MySQL | MS SQL Server | MongoDB | Redis

Tools & DevOps: Docker | Jenkins | Git | CI/CD | SonarQube | Postman | AWS | Kubernetes

Architecture: Microservices | Distributed Systems | Event-Driven Architecture | System Design

CERTIFICATIONS

Google Cloud Gen AI Agents | Microsoft AI-900 Azure AI Fundamentals | Microsoft AI-102 Azure AI Engineer Associate | Agile Software Development - University of Minnesota

EDUCATION

GLA University

Bachelor of Technology - Computer Science & Engineering | CPI: 7.55/10

Mathura, Uttar Pradesh

July 2021 – May 2025
